1. Study the Chapter 8 slides on the composite state implementation of the binary tree.

2. Implement the following methods in the BiTreeCS project:

```cpp
root()
remRoot()
clear()
remLeaves()
umLeaves()
height()
contains()
equals()
inOrder()
pPostOrder()
```

Use both `unit-root` and `unit-setRoot` to test your implementations of `root()`. Hand in `BiTreeCS.hpp` electronically per the instructions for your course.
